

INFORMATION AND

Activi-T BOOK

Please [click here](#) for Summary of Important Safety Information on pages 18 to 21.

While you are receiving treatment, you can complete the activities in this book and learn what **KYMRIAH** (*kim-rye-ah*) is and how it may help treat your cancer.

Approved Use

What is KYMRIAH?

KYMRIAH is made from your own white blood cells and is a prescription cancer treatment used in patients up to 25 years of age who have acute lymphoblastic leukemia (ALL) that has relapsed (went into remission, then came back) or is refractory (did not go into remission with other leukemia treatments).

Important Safety Information

What is the most important information I should know about KYMRIAH?

KYMRIAH may cause side effects that are severe or life-threatening, such as cytokine release syndrome (CRS) and neurological toxicities. Call your health care provider or get emergency help right away if you get any of the following signs and symptoms of:

• Cytokine Release Syndrome:

- Difficulty breathing
- Severe nausea, vomiting, diarrhea
- Very low blood pressure
- Fever (100.4°F/38°C or higher)
- Severe muscle or joint pain
- Dizziness/lightheadedness
- Chills/shaking chills

KYMRIAH is a treatment for kids like you who have had other treatments that have not been able to beat their cancer. KYMRIAH is used in kids who have *relapsed* or *refractory* B-cell acute lymphoblastic leukemia. “Relapsed or refractory” means that your cancer is tough, and other treatments haven’t been able to beat it.

Important Safety Information (continued)

What is the most important information I should know about KYMRIAH? (continued)

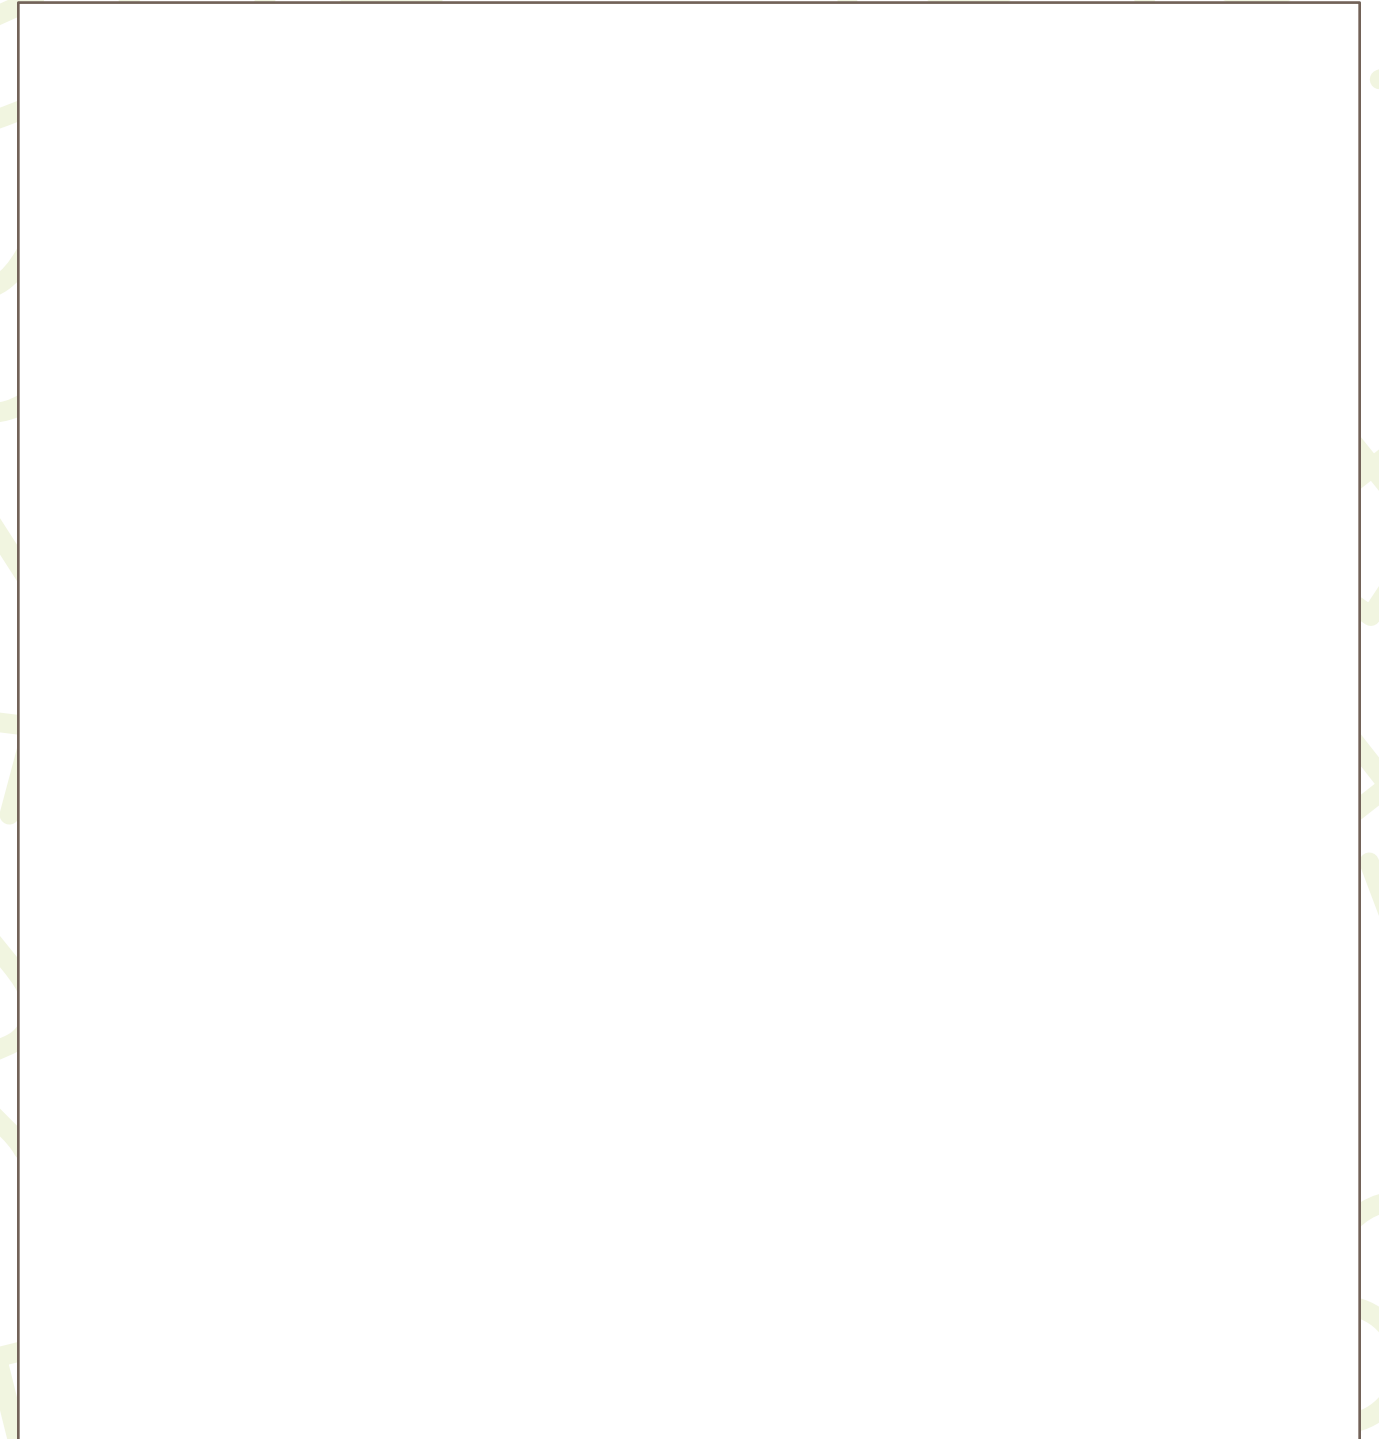

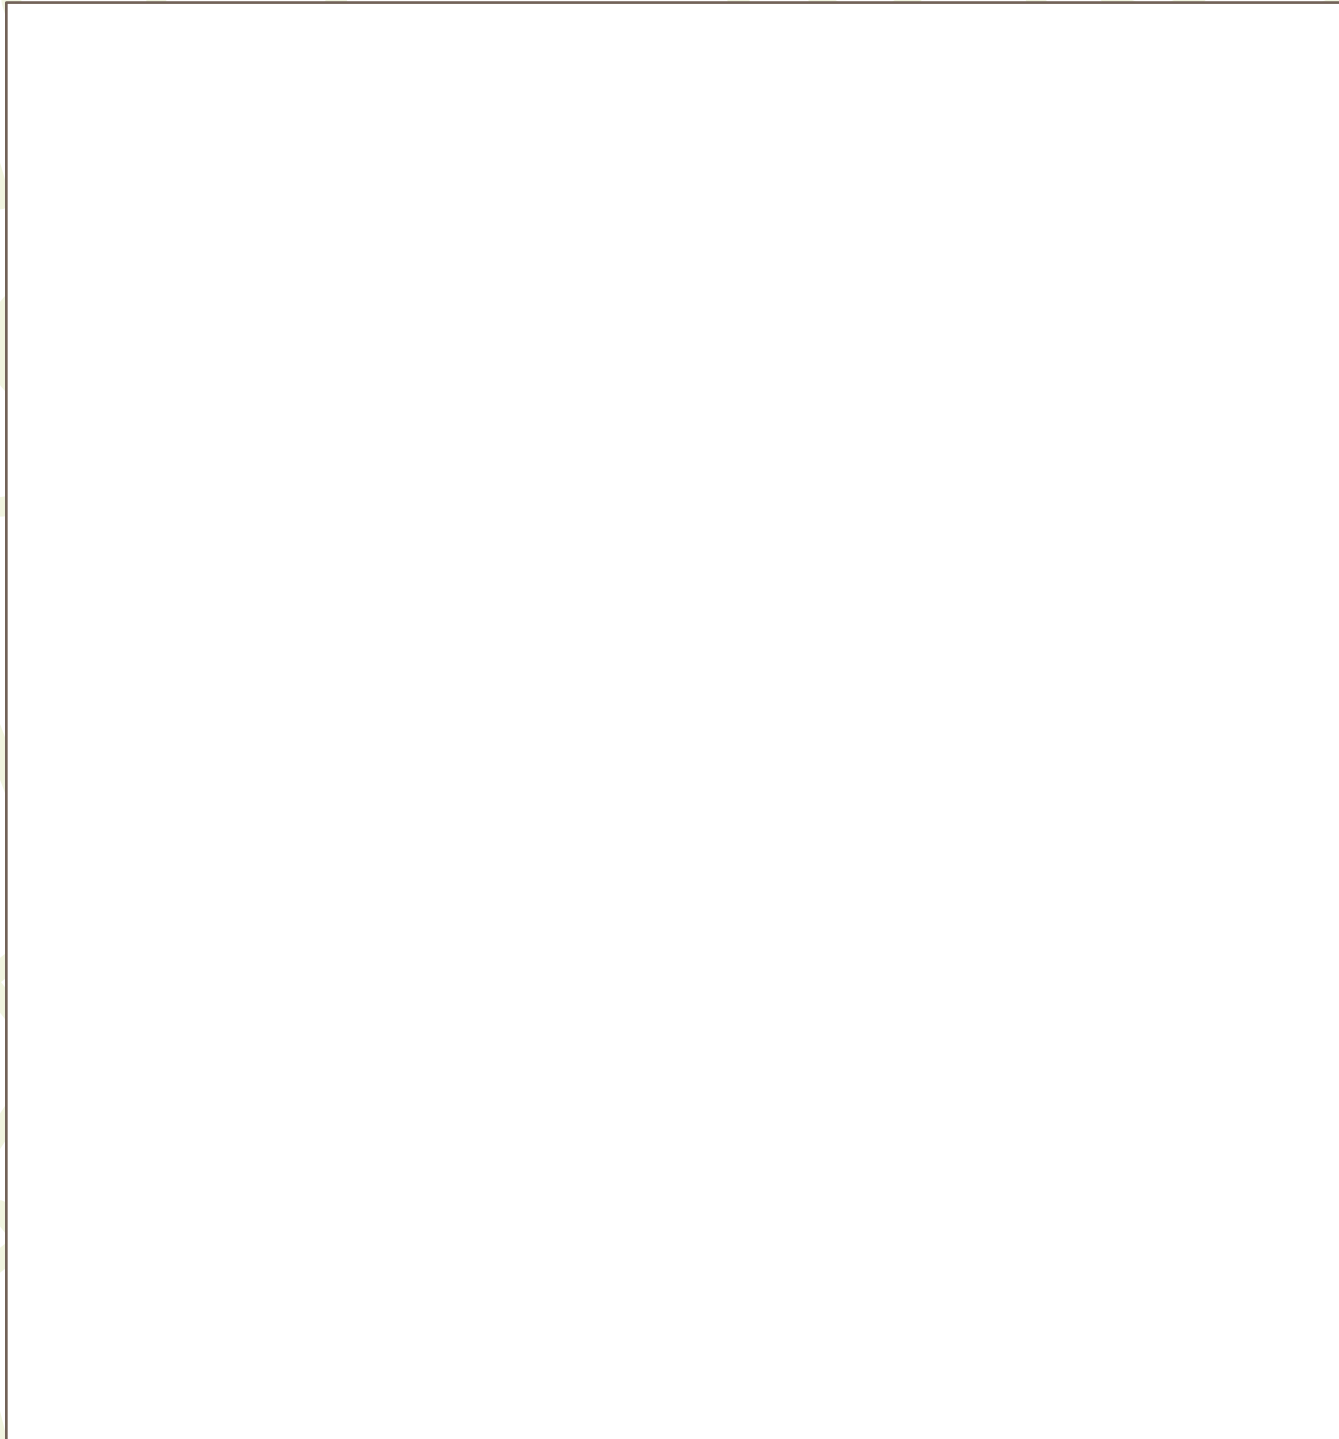

• Neurological Toxicities:

- Altered or decreased consciousness
- Agitation
- Difficulty speaking and understanding
- Delirium
- Seizures
- Loss of balance
- Confusion

You may be admitted to the hospital and treated with other medications if you have any of these side effects. If you are admitted to the hospital, tell the health care provider that you have received KYMRIAH.

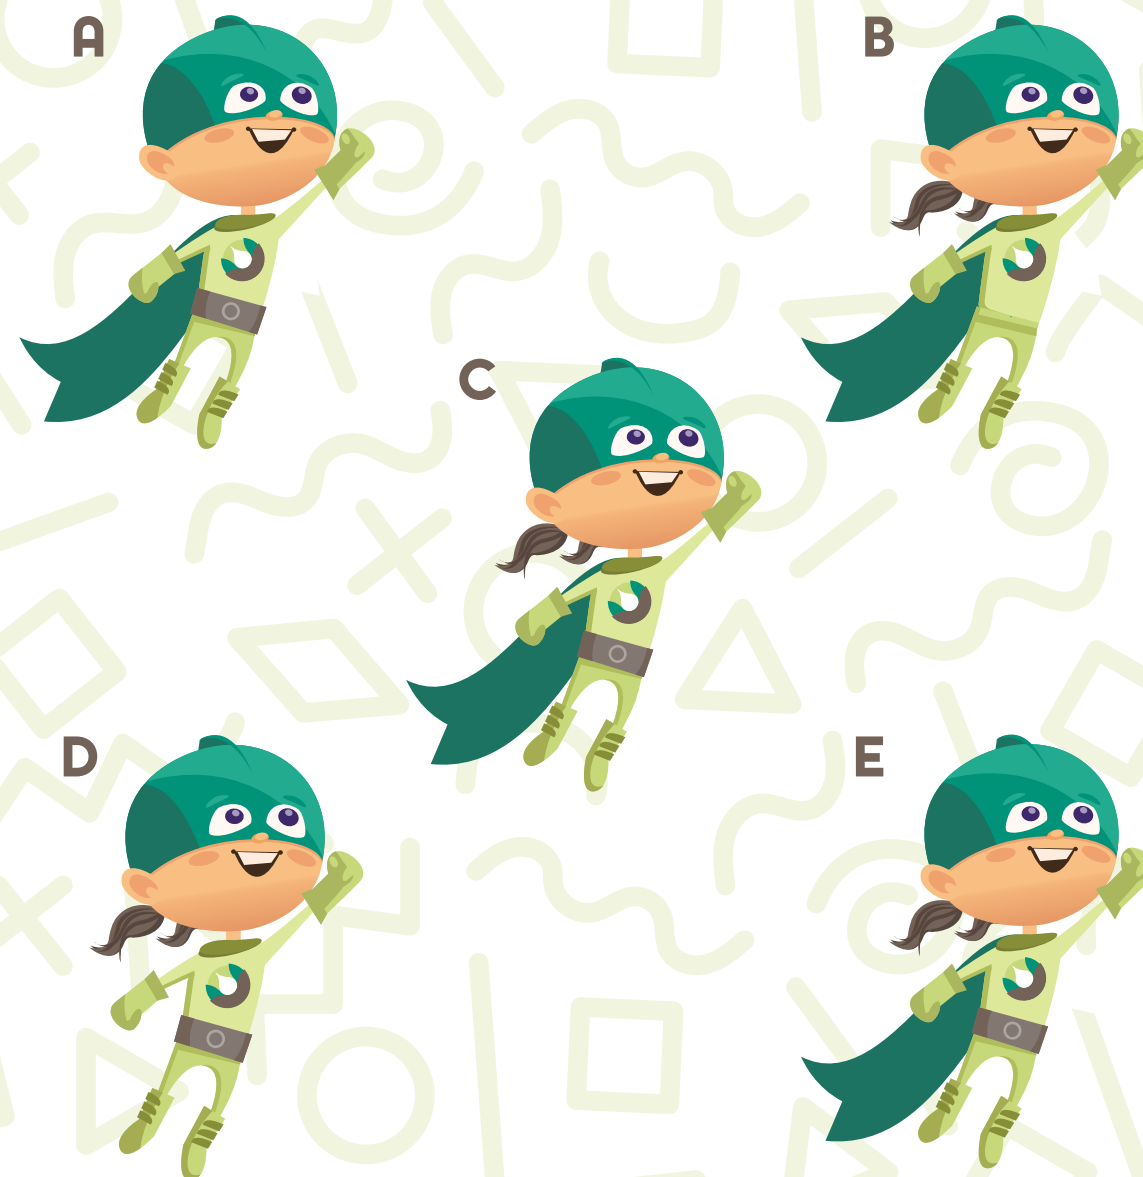

Draw your family.

**Your family is important and along with your doctors and nurses
can help you understand what to expect with your treatment.**

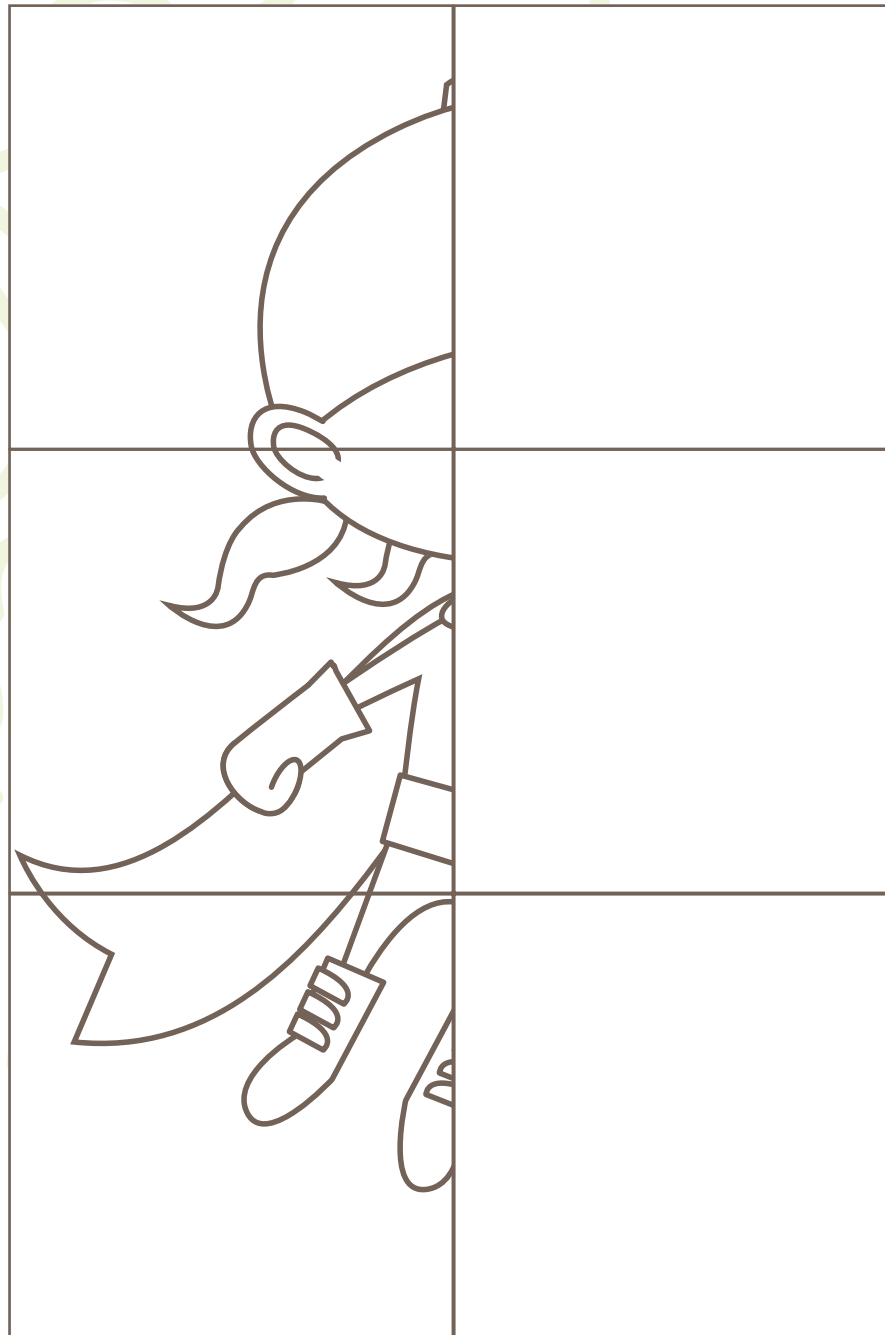

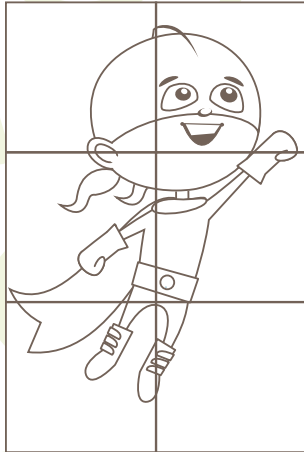

KYMRIAH is not like other medicines you may have tried. KYMRIAH uses your own body's strength to fight your cancer. Before you get KYMRIAH, you may go see a different doctor who will take some of your cells from your blood so they can be taught how to look for your cancer cells. Once your cells know how to find your cancer cells, they will be put back into your body to start fighting your cancer.

Find the 2 heroes that match each other.

Help draw the hero below.

Find the 6 differences between the pictures below.

Collect the words below
by circling them.
Some words might be diagonal!

KYMRIAH is a special kind of medicine
that trains some of your cells to be
cancer-fighting cells. Your trained
cells will help fight your cancer.
KYMRIAH has helped kids with the
same type of cancer that you have.
Not everyone’s experience is the same
but, for many kids, KYMRIAH helped
them beat their cancer.

Summary of Important Safety Information

What is KYMRIAH?

KYMRIAH is made from your own white blood cells and is a prescription cancer treatment used in patients up to 25 years of age who have acute lymphoblastic leukemia (ALL) that is either relapsing (went into remission, then came back) or is refractory (did not go into remission after receiving other leukemia treatments).

What is the most important information I should know about KYMRIAH?

KYMRIAH may cause side effects that are severe or life-threatening, such as cytokine release syndrome (CRS) and neurological toxicities. Call your health care provider or get emergency help right away if you get any of the following signs and symptoms of:

• Cytokine Release Syndrome:

- Difficulty breathing
- Fever (100.4°F/38°C or higher)
- Chills/shaking chills
- Severe nausea, vomiting, diarrhea
- Severe muscle or joint pain
- Very low blood pressure
- Dizziness/lightheadedness

• Neurological Toxicities:

- Altered or decreased consciousness
- Delirium
- Confusion
- Agitation
- Seizures
- Difficulty speaking and understanding
- Loss of balance

You may be admitted to the hospital and treated with other medications if you have any of these side effects. If you are admitted to the hospital, tell the health care provider that you have received KYMRIAH.

What are other serious side effects of KYMRIAH?

• Hemophagocytic Lymphohistiocytosis (HLH)/Macrophage Activation

Syndrome (MAS): Be sure to discuss with your health care provider the possibility of developing this life-threatening condition, and thereafter, your doctor will monitor you for the possibility of developing HLH/MAS

Summary of Important Safety Information (continued)

What are other serious side effects of KYMRIAH? (continued)

- **Allergic Reactions:** Serious allergic reactions, including anaphylaxis, which is a life-threatening allergic reaction, may occur after you receive KYMRIAH. Some signs and symptoms may include difficulty breathing, very low blood pressure, dizziness, swelling under skin, rash, nausea, and vomiting. You should seek emergency medical treatment right away if you have an allergic reaction
- **Serious Infections:** KYMRIAH can increase the risk of life-threatening infections that may lead to death. Tell your health care provider right away if you develop fever, chills, or any signs or symptoms of an infection
- **Prolonged Low Blood Cell Counts (Cytopenias):** KYMRIAH can lower 1 or more types of your blood cells (red blood cells, white blood cells, or platelets). After treatment, your health care provider may test your blood to check cell counts. Tell your health care provider right away if you get a fever or other symptoms of an infection, are feeling tired, weak, or short of breath, or have unusual bruising or bleeding
- **Hypogammaglobulinemia:** A condition in which the level of immunoglobulins (antibodies) in your blood is low and the risk of infection is increased. It is expected that you may develop hypogammaglobulinemia with KYMRIAH, and you may need to receive immunoglobulin replacement for an indefinite amount of time following treatment with KYMRIAH. Tell your health care provider about your treatment with KYMRIAH before receiving a live vaccine
- **Secondary Cancers:** KYMRIAH may increase your risk of getting cancers, including certain types of blood cancers. Your health care provider should monitor you for this.

How will I get KYMRIAH?

- Since KYMRIAH is made from your own white blood cells, your health care provider has to take some of your blood. This is called “leukapheresis.” It takes 3 to 6 hours and may need to be repeated. A tube (intravenous catheter) will be placed in your vein to collect your blood

Summary of Important Safety Information (continued)

How will I get KYMRIAH? (continued)

- Your blood cells are frozen and sent to the manufacturing site to make KYMRIAH. It takes about 3 to 4 weeks from the time your cells are received at the manufacturing site and shipped to your health care provider, but the time may vary
- While waiting for KYMRIAH to be made, your health care provider may give you therapy to stabilize your cancer
- In addition, before you get KYMRIAH, your health care provider may give you chemotherapy for a few days to prepare your body. When your body is ready, your health care provider will give you KYMRIAH through a tube (intravenous catheter) in your vein. This usually takes less than 1 hour
- You should plan to stay close to a health care facility for at least 2 weeks after getting KYMRIAH. Your health care provider will check to see if your treatment is working and help you with any side effects that occur.

What are the possible or reasonably likely side effects of KYMRIAH?

The most common side effects of KYMRIAH include:

- | | |
|-------------------------------------|-------------------------------|
| • Difficulty breathing | • Severe muscle or joint pain |
| • Fever (100.4°F/38°C or higher) | • Very low blood pressure |
| • Chills/shaking chills | • Dizziness/lightheadedness |
| • Confusion | • Headache |
| • Severe nausea, vomiting, diarrhea | |

These are not all the possible side effects of KYMRIAH. Talk to your health care provider for medical advice about side effects.

What should I tell my health care provider before receiving KYMRIAH?

- Tell your health care provider if you are pregnant, planning to be pregnant, or breastfeeding. Your health care provider may do a pregnancy test prior to your starting treatment. No information is available of KYMRIAH use in pregnant or breastfeeding women. Therefore, KYMRIAH is not recommended for women who are pregnant or breastfeeding. Talk to your health care provider about birth control and pregnancy

Summary of Important Safety Information (continued)

What should I tell my health care provider before receiving KYMRIAH? (continued)

- Tell your health care provider about all the medicines you take, including prescription and over-the-counter medicines, vitamins, and herbal supplements

What should I be aware of after receiving KYMRIAH?

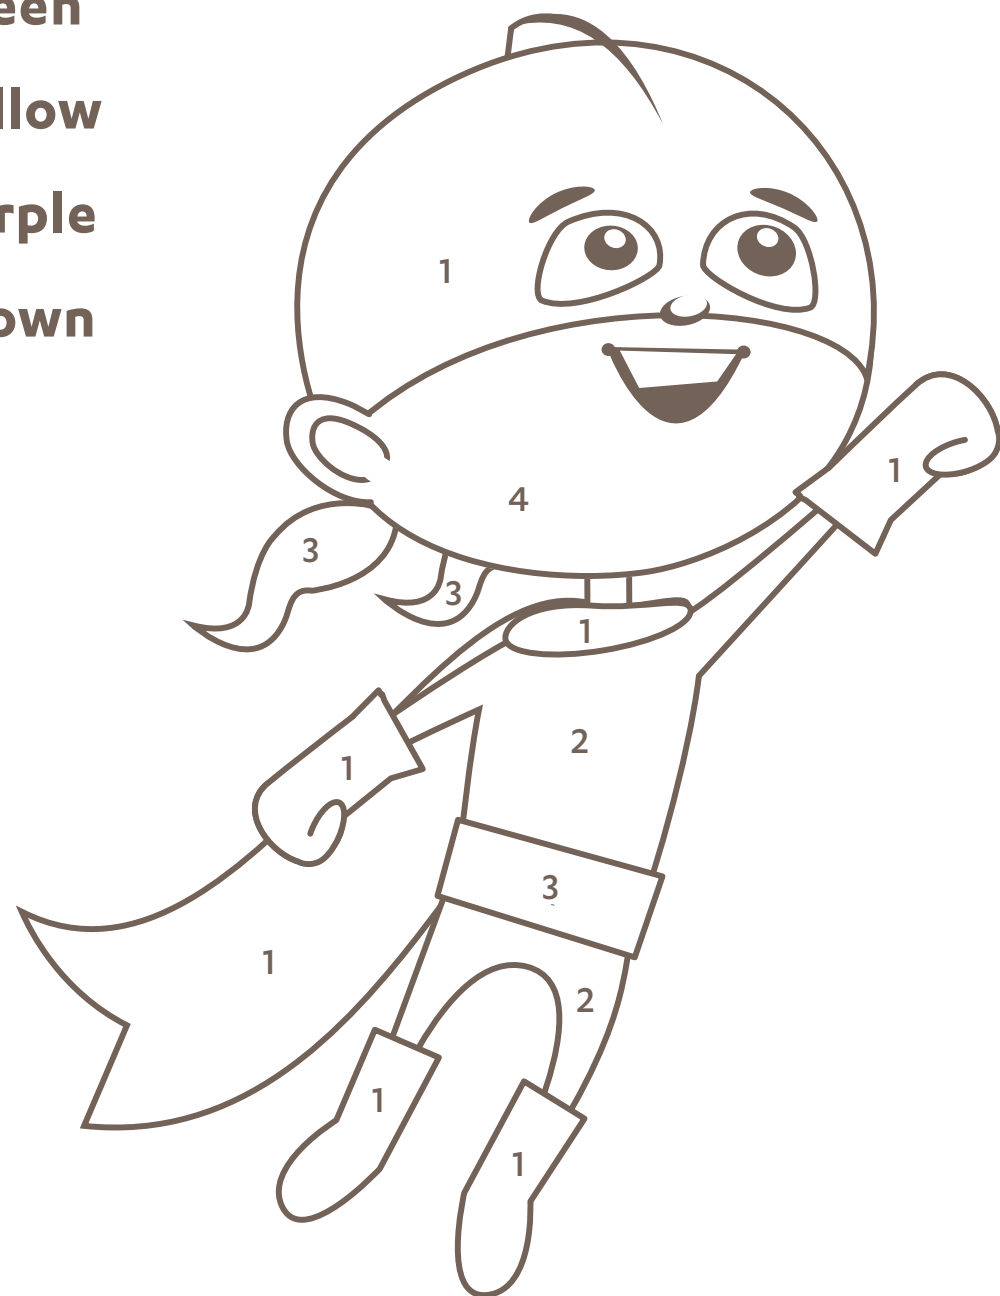

- Avoid driving for at least 2 weeks after you get KYMRIAH
- Do not donate blood, organs, tissues, sperm, oocytes, and other cells
- Some commercial HIV tests may cause a false positive HIV test result

This is a summary of the most important safety information about KYMRIAH. Talk with your health care provider or pharmacist about side effects. If you would like more information, the FDA-approved product labeling for KYMRIAH can be found at www.KYMRIAH.com or call 1-888-669-6682.

You are encouraged to report negative side effects of prescription drugs to the FDA. Visit www.fda.gov/medwatch or call 1-800-FDA-1088.

Build your own comic.

Create a comic by drawing a story in the boxes below. Use the bubbles for conversations, thoughts, or sound effects. Have fun bringing your own story to life!

Share your story.

What personal stories would you like to share with other kids and their families who are going through, or considering, treatment with KYMRIAH? It can be your general experience or things to keep in mind.

How to share your story.

Sometimes hearing other families' experiences can make all the difference. If you would like to share your story, complete the activity on the left, snap a picture, and e-mail it to **ShareYourStory@hpgroupllc.com**. Be sure to include the information below if it is okay for us to reach out to you.

Terms and conditions

By submitting my activity and information, I confirm that either I or my child has been prescribed KYMRIAH. I agree that Novartis Pharmaceuticals Corporation (NPC) and/or its vendor, Health Advocacy Strategies, may contact me at the phone number and/or email address provided for additional information and to discuss possible use of my activity and information in future marketing materials. I understand there is no guarantee that my activity or information will be used. I understand I am under no obligation to participate. Read the full Novartis Privacy Policy at <https://www.novartis.com/us-en/privacy>

☐ **By checking this box,** I agree to the above terms and conditions.
